iBIB2011

The market for bio-based plastics and composites continues to grow at double-figure rates and has now gained true international status. However, the new market functions mainly based on 'insider-knowledge' and therefore lacks transparency.

The international business directory iBIB2011 comprises information on about 70 major companies, associations, agencies and R&D organisations from 16 countries on 4 continents. Publishers are the renowned nova-Institut and bioplastics MAGAZINE.

The iBIB2011 will enable industrial suppliers and customers to reach out to one another. It will help companies to find the best bio-based solutions available worldwide within the sectors of bio-based plastics, composites and green additives. Via print and PDF versions the iBIB2011 will reach ten thousands potential customers. The print version will be distributed free of charge by the publishers and international partners at trade fairs, exhibitions and conferences worldwide. The PDF version will be made available to a wide audience via email and websites.

The online database with detailed index will help you to reach a supplier in a most targeted way. At www.bio-based.eu/iBIB a free and direct access to the database with more than 100 specific criteria is open to everyone. Also the full PDF version is available for free.
