folgenden Informationen sind nur in Englischer Sprache verfügbar:

Textiles are for us not only vital protection from the weather, but also a means of expressing our personality and individuality. A life without clothes is therefore unimaginable for us. Unfortunately, the production of textiles is often associated with negative consequences for people and the environment. Large amounts of resources are needed and clothing usually has a short lifespan. The vision of a new, more sustainable textile industry requires fundamental changes in the

systematic handling of textiles and resources. This webinar shows innovations for a sustainable, resource-saving production of textiles. Entirely new materials and resource as well as new ways of dyeing and processing will be presented.
