Due to the current situation, the fifth edition of "Progress in Biogas" will take place online.

And with "Science meets Practice" as our motto, we once again invite you as researchers and practitioners to present your breakthrough results, best practice examples and experiences from the field.

And with the European biogas market alone anticipated to exceed USD 6 Billion by 2025, the future for smart, innovative and sustainable biogas production looks extremely promising.

To bring together scientists and practitioners, "Progress in Biogas V" will yet again serve as the

best platform to explore the future of biogas.

IBBK's 3-day conference "Progress in Biogas" will bridge the gap between technology and end user.

Together with the University of Hohenheim, one of the world's leading biogas research facilities, we'll offer the international scientific community as well as practitioners a platform to present the status quo and new and modern technologies.

In the last 14 years, more than 1,000 participants from all continents joined the conference series "Progress in Biogas" – and once again we're expecting a big participation of biogas professionals, researchers, practitioners and enthusiasts for the fifth installment.
